

MAC101 QUIZ NO 2

Write a short C++ program that lets the user enter 2 numbers.

If the first number is bigger than the 2nd number then the program will count down from the first number value to the value of the second number. (See below.)

```
Enter the first number 25
Enter the second number 20
25 24 23 22 21 20
```

If the first number is not bigger than the 2nd number then the program will state that the value of the first number is not bigger than the second number. (See below)

```
Enter the first number 20
Enter the second number 25
20 is not bigger than 25
```

For extra credit edit the above program so when the first number is not bigger than the 2nd number then the program will count up from the first number to the second number. (See below)

```
Enter the first number 20
Enter the second number 25
20 21 22 23 24 25
```

Please send your work to prof@dpeled.com

Make sure I verified that I received your work before you leave the online session.

GOOD LUCK!
