

MAC101 Quiz NO. 7

Edit the program that we review in class ([here](#)) and instead of using a random number generator, let the user enter 6 integers. Thereafter, the program should sort the numbers in a descending order.

For Example: For the following inputs: 77, 12345, 22, 99, 33 and 7 the output should be as follows:

```
Enter any integer 77
Enter any integer 12345
Enter any integer 22
Enter any integer 99
Enter any integer 33
Enter any integer 7
Arrange the numbers in order (sorting in decending order ) --> 12345  99  77  33  22  7
```

Hint: There is no need to change the core of the program. Merely remove the random generator and add a few lines of code to allow the input.
