

## MAC101 Quiz NO. 8

Edit the program we did in class ([here](#)) which lets the user enter 6 numbers and thereafter sort them in a descending order.

Post editing, the program should display the entered numbers both in descending and in ascending orders.

Ex: If the user enters 123, 44, 555, 678, 12 & 778 the display should be as follows:

```
Enter any integer 123
Enter any integer 44
Enter any integer 555
Enter any integer 678
Enter any integer 12
Enter any integer 778
Arrange the numbers in order (sorting in descending order ) --> 778 678 555 123 44 12
Arrange the numbers in order (sorting in ascending order ) --> 12 44 123 555 678 778
```

Please submit the program's listing and the display capture to:

[prof@dpeled.com](mailto:prof@dpeled.com)

Make sure that I receive your work before you leave the online session.

GOOD LUCK!
